eBrief™ | INTRODUCING THE NEXT GENERATION SYSTEM

REDESIGNED INSERT

The new insert is longer, thinner, and optimized for single-position application, which then

- Eliminates placement variability across users and reduces staff training requirements
- Significantly reduces per-unit packaging volume
- Lowers storage demands at both the room and facility level

EXPANDED SENSOR AREA

The active sensor surface has been greatly increased, resulting in

- Measurably more reliable event detections
- Improved integrity of data monitoring across your community

UPGRADED TECHNOLOGY

Upgraded wireless communication extends detection range and coverage throughout your facility, which then

- Eliminates the dependency on fixed TID infrastructure
- Removes the need for dedicated eBins
- Enables continuous monitoring during participant transport, day programming, and off-site outings

BACKWARD COMPATIBLE

We heard your feedback - the new system is fully compatible with existing installed system infrastructure.

Simpler workflow and less staff training

Reduced supply management burden

Greater flexibility to monitor Users anywhere

More accurate detections and reliable data
